### 1. Introduction

The Title 1, Texas Administrative Code (TAC), Chapter 202 <sup>1</sup>, RULE §202.24 Agency Information Security Program requires that all state agencies have an information security program consistent with the rules defined in the TAC 202 which includes protections, based on risk, for all information and information resources owned, leased, or under the custodianship of any department, operating unit, or employee of the agency including outsourced resources to another agency, contractor, or other source (e.g., cloud computing). The program shall include periodic assessments of the risk and impact that could result from the unauthorized access, use, disclosure, disruption, modification, or destruction of information and information systems that support the operations and assets of the agency.

The HHS Data Use Agreement requires that Contractor/Third Parties accessing and/or managing confidential information comply with periodic security controls compliance assessment and monitoring by HHS as required by state and federal law. Federal Law includes the Health Information Portability and Accountability Act (HIPAA) 45 CFR Part 164 and other federal regulations that require routine security risk analysis and risk management. These processes must include security control measures for reducing risk to an acceptable level as recommended by the National Institute of Standards and Technology (NIST).

For awarded contracts, the completion of the HHS Data Use Agreement and Information Security and Privacy Initial Inquiry (SPI) satisfies an initial security risk assessment for Contractor/Third Parties.

The Information Security and Privacy Initial Inquiry (SPI) controls are the HHS minimally acceptable security controls baseline required prior to contract award for all Contractor/Third Parties that access and/or manage HHS confidential information with external Information Systems. The SPI baseline of security controls are identified in Section 8.

## 2. Purpose

The Information Security Risk Assessment and Monitoring Procedures (IS-RAMP) is designed to meet compliance with state and federal regulations to assess risk and accomplish the security monitoring requirement with the overall objective of reducing risk to a manageable level.

## 3. Scope

The IS-RAMP applies to Contractor/Third Party external service providers that access or manage Health and Human Services (HHS) Confidential Information.

The IS-RAMP does not apply to customers of HHS services.

## 4. Audience

HHS IS-RAMP V1 Page 3 of 30

<sup>&</sup>lt;sup>1</sup> The Title 1, Texas Administrative Code (TAC), Chapter 202 can be found at: http://texreg.sos.state.tx.us/public/readtac\$ext.ViewTAC?tac\_view=4&ti=1&pt=10&ch=202

The IS-RAMP is primarily intended to serve Information Owners, Information Security Officers and Contractor/Third Party Information Security staff as a tool to meet compliance with state and federal monitoring and assessment requirements; identified within the introduction section of this document.

## 5. Background

The security controls contained in Section 8 are designed to protect and meet the security objectives of confidentiality, integrity, and availability of information for the information system, reducing risk to a manageable level.

The security controls are derived from the controls prescribed in the Texas Department of Information Resources (DIR) Security Control Standards Catalog<sup>2</sup> and the NIST Special Publication 800-53<sup>3</sup> Revision 4 Moderate security control baseline. Reviewing these DIR and NIST documents will convey how these security controls are designed to meet the security objectives of confidentiality, integrity, and availability and protect information systems from unauthorized access, use, modification, and destruction.

#### 6. How To Use This Document

#### **Small Workforce Operations**

Small Workforce Operations will only be required to comply with the SPI Security Controls baseline identified in Section 8 of this document.

Small Workforce Operations typically involve small, informal home office types of information technology configurations that *may* also contain the following characteristics.

- Small, independent, family-owned, controlled, and operated business
- A minimum amount of employees
- Small amount of business volume, typically not franchised, therefore open for business only in a single location.
- Small business's operated out of the primary residence of the owner(s).

#### **System Security Plan**

Following contract award, the HHS Information Owner or their designee will collaborate with the respective Agency ISO and Contractor/Third Party to identify required security controls for the information system.

A System Security Plan (SSP) template, provided by the Agency ISO, will be used to document the required security controls as well as other information specific to the information system.

The SSP template will become the System Security Plan for the information system.

HHS IS-RAMP V1 Page 4 of 30

-

<sup>&</sup>lt;sup>2</sup> The DIR Security Control Standards Catalog can be found at: http://publishingext.dir.texas.gov/portal/internal/resources/DocumentLibrary/Security%20Control%20Standards%20Catalog%20V1.2.docx

<sup>&</sup>lt;sup>3</sup> The NIST SP 800-53 can be found at: <a href="http://nvlpubs.nist.gov/nistpubs/SpecialPublications/NIST.SP.800-53r4.pdf">http://nvlpubs.nist.gov/nistpubs/SpecialPublications/NIST.SP.800-53r4.pdf</a>

The selection and implementation of required security controls documented in the SSP will be a risk-based approach, where 100% compliance will be achieved over time based on the control implementation timelines identified in Section 8.

#### **Identifying the Security Control Baseline**

The SSP includes a Security Categorization (SC) process to determine the correct baseline of security controls for the information system.

Small Workforce Operations will only be required to comply with the SPI Security Controls baseline identified in Section 8 of this document.

There are 3 possible SC levels identified in the SSP which are Low, Moderate or High.

The SC levels map directly to the HHS Control Baseline of Low, Moderate or High contained in Section 8 of this document. For example a SC level of high will map to a security control baseline of high.

The security control baseline will map directly to and is primarily based on the 3 data classification levels of Public, Agency Sensitive or Confidential.

Although in some cases, based on the business impact of the information system, a higher SC level and control baseline may be more necessary than the data classification requires. For example, a climate control system in a data center would be considered critical and may require a high control baseline although it does not process confidential information.

The mapping of the SC level and impact to data classification security control baseline contained in Section 8 are indicated in the following table.

HHS IS-RAMP V1 Page 5 of 30

Security Categorization (SC) & Impact	Regulation Drivers	Data Classificatio n	HHS Control Baseline	Control Source
Low	TAC 202	Public	Low	TAC 202 controls catalog (Low baseline controls).  Is for systems using HHS public data
Moderate	TAC 202	Agency Sensitive	Moderat e	TAC 202 controls catalog (Low baseline controls) + Additional controls as necessary (SANS top 20 Critical Controls).  Is for systems using HHS agency sensitive data
High	TAC 202, Federal	Confidential	High	NIST SP 800-53 Rev 4 Moderate base controls +control enhancements (TAC 202 controls catalog Moderate controls)  • Additional specific controls (e.g., HIPAA, SANS requirements mapped to NIST SP 800-53 rev4.  Is for systems using HHS confidential data

# 7. Risk Assessment and Compliance Monitoring

Contractor/Third Parties are required to follow the risk based approach of control implementation identified in their information system SSP's, with the objective of achieving 100% compliance of control implementation based on the implementation timelines of Section 8.

HHS Information Owners are responsible for ensuring information security risk assessments are performed. The information system SSP will be the primary document for the risk assessment and compliance monitoring.

HHS Agency Information Security Officers and Information Owners will identify on an annual basis, a schedule of which systems will be assessed for compliance monitoring.

Once notified by the Agency Information Security Officer and Information Owner that a system is scheduled for assessment, the Contractor/Third Party will have 90 days to return a completed SSP.

HHS IS-RAMP V1 Page 6 of 30

## 8. Information Security Controls Mapping to NIST SP 800-53 rev 4

The National Institute of Standards and Technology (NIST) Special Publication (SP) 800-53 controls identified below will be assessed during the HHS annual risk assessment and monitoring process. The Information Security and Privacy Initial Inquiry (SPI) controls are the HHS minimally acceptable controls required for contractors that access and/or manage HHS confidential information. For contractors with small standalone computers (Small Workforce operations), only the SPI controls are required. All other systems and contractors will also be required to comply with the LOW, MOD or HIGH baselines control according to the type of HHS data they are using or per the determined system security categorization level. At a minimum, the control baseline of LOW is for systems using HHS public data, MOD is for systems using HHS agency sensitive data, and HIGH is for systems using HHS confidential data. Compliance with these controls will be on a risk-based approach where 100% compliance will be achieved over time.
